modern methods for trace element determination

Request PDF on ResearchGate | Modern sampling and analytical methods for the determination of trace elements in marine particulate material using magnetic sector inductively coupled plasma-mass spectrometry | Trace elements often limit phytoplankton growth in the ocean, and the quantification of particulate forms is essential to fully understand their biogeochemical cycling. There is presently a lack of reliable measurements on the trace elemental content of marine particles, in...Â Lab- and element-specific trends in recoveries are discussed, though all digestion methods tested appear to completely solubilize particulate material. Describes the theory, apparatus, performance and usage of modern methods for trace element determination, atomic absorption, emission, fluorescence and mass spectroscopies, x-ray techniques and activation analysis. Attention is given to sample preparation, current calibration procedures and to methods for trace element speciation. Contains in-depth information on relatively new techniques such as ICP-MS and PIXE. All methods are illustrated with authentic examples from the ever-expanding fields of environmental and biological analysis of high purity materials. About the Author. C. Vandecasteele
