**!!! Time & Day !!!**

# December Meeting

## 9:30 am

**The December meeting is on the 18<sup>th</sup> at 9:30 am. The meeting is at the old Hartville Kitchen at the corner of SR 619 and Market Street.**

### **The Big Auction**

This is the meeting of our annual auction. It is usually a big success due to the generosity of many of our members. Everyone that has tools and supplies that they no longer use is invited to bring them in and donate the proceedings to the club. Just about every one has something that they no longer have a use for but would be a treasure for someone else. So bring in your forgotten treasures and an ample supply of money to buy the treasures others bring in. There is usually a lot of wood of all types at these auctions. Please only bring items that you think others will want. Do not miss this fun event that is our biggest yearly fundraiser.

BUCKEYE WOODWORKERS

AND TURNERS

Nov. 20, 2004

The regular meeting of the BWT was called to order by V.Pres. Bruce Lance. He welcomed everyone to the meeting and asked any visitors to stand and identify themselves to the club. Seven visitors gave their names and identified their communities. A total of 45 members were present at the meeting.

Bruce Lance thanked the club members for helping to make the 314 Christmas ornaments that were used to decorate the tree that we donated to the Children's Hospital Christmas Tree Auction in Akron. The tree and lights were donated by Hartville Hardware and the club

members turned and scroll sawed the ornaments for the tree. Pres. Lance stated that the tree was decorated and then taken to Quaker Square to be put on display. He also stated that the method of transportation for the tree way by of truck rented at a tremendous discount from the Uhaul Corporation. Our club would like to thank them for their generosity in helping out at this time of year. The tree was on display and a price of \$900 was established. The tree had been sold during the first day of exhibition. It was purchased by an anonymous buyer, named "Donald Duck". The request to keep the buyer a secret, seemed to be the normal way in which trees were purchased at the auction. Again, the club wishes to thank all the members that contributed to this great community activity. It is hoped that we can participate again next year.

V. Pres. Lance indicated that approximately 50 people attended the demonstration by Lyle Jamieson last month. He demonstrated the ability to turn hollow vessels and also use of laser measurements to attain consistent wall thickness. Numerous club members have designed their own equipment from this demonstration.

Attention was given to Stuart Batty from England and his trip to NE Ohio. Bruce stated that he had visited North Coast and that he was willing to come to Tallmadge and visit with Bruce and other members of BWT. This was a tuition based meeting that was extremely helpful in explaining the technical aspects of woodturning. Marty Chapman who had attended the meeting in Tallmadge, stated that he was well worth seeing. He said that he was a real teacher and explained the aspects of "why" things occurred in turning. There was a no-hands on approach to this meeting....just all teaching concepts. George Raeder stated that Stuart Batty was "the best turner I have ever seen".

The December meeting will consist of our Annual BWT Auction. It is being held in Dec., due to the fact that Tom Nero, our auctioneer will be vacationing in the southern climates of Florida during the colder winter months. All members were asked to search their shops for older tools, wood, and equipment that they no longer need and are willing to donate to the auction. All proceeds of the auction will be put in the club treasury. Members are encouraged to sign up at the beginning of the meeting and acquire an auction number for the bidding process.

BWT shirts and T-shirts are available with the printed club logo. Members are to see Treasurer Lou Mineweaser for order blanks.

Marty Chapman inquired when the next club demo would be held at Hartville Hardware. Bruce informed him that there would be another club demo in Feb at the Hartville Tool Show. Members could begin to think about the projects that they wish to demonstrate at the show.

Dues are payable by Jan. 1, 2005 for the coming year. Any member that has not signed up will be taken off the mailing roster.

Gary Lansinger, AAW board member, stated that there will be an AAW / Overland Park, Kansas Symposium that will be coming on July 22 - 25, 2005. The title of the 19th Annual AAW Symposium will be called, "Learn to Turn". He stressed that members should contact the following email address for registration: [woodturner@qwest.net](mailto:woodturner@qwest.net) or use the web site, [www.woodturner.org](http://www.woodturner.org) for further information. Any member can contact AAW at 222 Landmark Center, 75 W. Fifth St.; St. Paul, Minn. 55102 or phone 1-651-484-9094 for registration and information. Gary also stressed that they will have a new program this year that members can bring in any 10 - 17 year old youth to the symposium for free. He also stressed that it would be a good idea for our club to entertain the thought of allowing youth to become members to our club and possibly to our demonstrations. A membership vote was taken and it passed unanimously.

Bruce Lance suggested that members look at the newly published book, called, "Beneath the Bark". The book shows the movement and direction that woodturning has taken in the past several years.

Bruce also thanked Ray Maar and his wife for the work that they did on providing food for the Lyle Jamieson demonstration. He also thanked Jim Thomas and his wife for providing and setting up the audio / visual equipment for the showing of photo slides.

Mr. Lance stated that he was at George Raeder's house recently and observed some of the finest displays of woodturning that he has ever seen. George, former President of North Coast Woodturners, indicated that the weekend of Nov. 20-21, he would be having a showing and sale of his woodturnings as well as his wife's ceramic art pieces. All members were invited to attend.

Election of officers will be held in Jan. for the 2005 club calendar. It was questioned whether the current presidency will last for a two year term.

We will need two officers to fill current positions of Pres. and V. Pres. Ray Maar agreed to take over as Newsletter Editor for the 2005 season.

Dave Hout mentioned that a new building is currently being built behind the Hartville Kitchen and it will become home to the Hartville Salad Dressing business. That move will mean that our current meeting place will be torn down in June. So it suggests that BWT will have to be looking for a new location to have our monthly meetings. He indicated that we should be thinking about this now so that we can make a smooth transition when the time comes in late spring. Members had some questions about whether HH would be building an educational unit near the store and our using those facilities. Dave responded by saying that plan is still in effect, but the bigger question is when it would occur. He suggested that it might be years away and we need something more concrete. HH would probably house our needs, but we would have to meet with the Miller family/owners and see what they would do for us. Another suggestion was for North Coast and BWT to join together to purchase some land and build a building for our clubs needs. It was determined that the economic costs would be prohibitive. Jim Arnett suggested that he will be the director of the Senior Citizens Center of Barberton and that he had some nice facilities in the old Barberton High School that might be available. Others suggested that most communities have an armory that might be available for our use. Bruce indicated that we have moved to many times and that most people like this area in which to meet. It would be hard to move to another area. It was suggested that our membership at BWT meetings is higher when we meet in Hartville than when we meet in any other location. It was observed that we had a membership group that lives in extreme eastern Ohio and also near Pittsburgh and that meeting any further west from Hartville, would add an additional hour to their driving time. A committee of Marty Chapman, chairman, Dave Hout, Gary Lansinger, and Bruce Lance would meet with the Miller family to see what could be worked out in the near future.

Don and Kim Mills indicated that they had a lot of trees to cut down and it would make good turning material for our club members. Any club member wishing to acquire this turning stock should contact Don at 330-819-3390 or 330-498-0392 for further information.

Show and Tell information was provided by several members. Hoby Horn showed his pierced hollow vessel as a follow up to the Lyle Jamieson demo. He also described his three piece candelabra with a

natural base. Ralph Kubel turned some small vases out of ironwood and then another piece out of cherry burl. He finished them with Danish oil, then wax and then buffed with a rag.

Jim Thomas and wife showed the club a vase that they completed as well as some Christmas ornaments and porch decorations.

They finished their work with Minwax Antique Oil Finish.

Bruce indicated that he had information on CA glue and the curing process. He offered these hints...CA glue has acid stabilizers that have been added so that it cures by reacting to moisture content in the piece and the air.....NOT by reaction to the absence of oxygen, as has been previously discussed. CA can be activated quicker if sprayed with water with a little baking soda added.

CA must be stored in a cool dry location.

Due to the failing health of Don Karr's wife, Marty Chapman has taken over as the library assistant. He suggested that an inventory of all library materials be made in the coming months.

The treasurer informed us that \$54 was collected by the club raffle and \$29.75 collected in the coffee and donut donations.

A special raffle was issued for a woodturning class to be held in North Carolina. Dave Hout, an instructor for the John C. Campbell Folk School in Brasstown, North Carolina, has donated a week's tuition, room and board, to the school. Any member that desired could make a donation of \$10 to the raffle and a winner was selected. The winner was Phil Brower. Congratulations to winning a great week of woodturning.

The next monthly meeting will be held on Dec. 18, 2004

Metal Spinning by Dave Hout.....

Dave started the club demo by providing some past history of turning, both wood and metal. He indicated that woodturning began about 3500 years ago while metal spinning began about 4000 years ago with the Egyptians. The idea being that woodturning began later, after metal tools became available to cut the wood. Metal spinning came to America in the 1840's. There are metal spinning shops in most

communities, however they are not advertised. Most metal spinners are of the opinion that they have an exclusive technique and are somewhat reluctant to share their knowledge. This concept is a carryover from the days of the guild system in the middle ages when family secrets were never shared with the outside world, but kept within the shop of family. This continued until John Jacob Holtzapffel explored the process and then wrote books about it in order to share his knowledge. Today, there are many items that are made by the metal spinning process. Examples would be the circular light reflectors used on shop lamps, some auto parts, 8 foot TV satellite dishes, cymbals for percussion instruments, and even pots and pans for kitchen cooking.

To start with, Dave explained that one would use a metal disc that are usually around 50/1000 thickness. He uses aluminum, copper, pewter, and also brass. Aluminum discs cost about \$1 while pewter discs run about \$5 per piece. He indicated that metal reacts to force and not heat. If you work the metal to much, it will become very brittle and hard and therefore possibly crack and break. This is called work-hardening. Aluminum will work-harden the least, then next would be copper, and finally brass. Pewter has a characteristic that will not allow it to work-harden. Pewter is made up of about 90% tin, considered a semi-precious metal, 8% antimony and the rest are trace elements. Prior to the 1900's, pewter had high contents of lead, which reacted to acidic foods, like tomatoes. This reaction resulted in lead poisoning over many years of use. Usually this only impacted the wealthy citizens, since they were the only ones who could afford the finer dishes. The poor people were relegated to using wooden bowls for their daily needs and therefore not impacted by this problem.

To begin, the lathe must be checked to make sure that the center points of the head stock and tail stock all line up correctly. Any inaccuracy here will cause the metal disc to work its way out of the wooden mold or shaped design. You will need a wooden form in order to spin the metal over and a wooden tail stock plug to cover the tail stock point. This tail stock point should fit snug against the live center of the tail stock bearing. The tool rest is a flat bar with two pins to act as a fulcrum on which to rest the tools. The pins have holes inserted into the bar stock tool rest about an inch apart. The tools consist of a wooden stick, more technically described as a "shovel handle" that is about 18 inches long and 1 1/2 inches in diameter. Both ends have wedge shaped designs in order to get into the tight location behind the spinning metal. This tool is

initially used to gently force the spinning metal disc into a concentric spinning motion and correct any imbalanced position. The other tool is a metal shaft of about 1 inch diameter and the end is flattened to a shiny smooth bulbous geometric shape. This metal rod has a wooden handle that make the overall tool about 36 inches long. It is of that length so that the metal worker can get leverage against the fulcrum to push on the metal. The process is to use pressure against the tool rest pins. The wooden tool is used behind the spinning metal and the metal rod is used on the top. Both tools are used at the same time to work the metal in a back and forth motion. The purpose with that procedure is to prevent the metal from "pushing" itself to the end of the piece and thereby having thinner parts at the lower end of the vessel and more metal at the outer rim. German Brown Soap is used as a lubricant on the metal disc. It is a vegetable oil based substance that is considered food safe. This is the best spinning lube available.

The actual process is as follows...the wood form is attached to the head stock with the use of a faceplate. The wider part of the form is toward the head stock or left side of the lathe bed. The metal disc is then placed between the bottom of the wood form and the plug on the tail stock. It has a loose fit so that adjustments can be made to the out of round disc with the wood tool, as described above. Then the tail stock is tightened and both tools are touched to the spinning disc. Approximately 20 sec. to 40 sec. is all that is needed to spin the final shape. When finished, you should trim the upper edge of the bowl. A groove in the wooden tool is used to fold over the edge to make a rim with the help of the metal tool to start the process. The lathe speed is running around 1000 to 1200 rpm. This is about the same speed that is used for a wood bowl blank of about 6 inches in diameter. Woodturners calculate the speed of the lathe by no. of revolutions X the diameter of the blank to equal between 6000 start number to 9000 finish no. All tools are used under the center line of the lathe to get good leverage. Scotch Brite pads can be used to polish the piece. Move through the grits from green, red, gray, and to finally white to get the high polish. One could also use the Beall system for polishing....which is starting with brown tripoli, then white diamond and finally red rouge for a high polish.

Thanks Dave for a great demo.....

Respectfully submitted

Jerry Schaible, Sec.

## **Library Books!!!**

Would everyone please check around to see if they have any of Buckeye's books at home. There is an inventory of the books going on and it will only be complete when we know what books are still out.

## **The 2005 Symposium of the AAW**

The 19th Annual National AAW Symposium

Date: July 22-24, 2005

Location: Overland Park Convention Center, Overland\_Park, Kansas

(A suburb of Kansas City, Kansas)

For Sale!

Dave Hout an air cleaner that hangs from the ceiling. It is a large commercial unit that sells for about \$900.00 new and will sell for \$350.00.

## **Nametags**

We have located a source for nametags (thanks to Mike Weinberg of Pelican Graphics). If you would like to order a name tag, please see Lou Mineweaser. Cost is \$4.00 payable on delivery.

General 260 lath for sale 20 inch swing two variable drives the one that came with it and a electronic control also has a 12 inch extension that can be used on either end 2000.00 dollars or best reasonable offer.

6" slow speed Baldor grinder - \$100.00

Bruce 330-633-9622

Buckeye Burl is one of the best woods for turning once you get past the smell. Kind of like urine when the wood is a bit green. It has a great color combination of blue and yellows mostly and is about 3 times as hard as cork I would say. It can be turned when green and doesn't shrink much and takes a polish very nicely. I see it as large turnings like bowls and small items like pens. You can turn it green and finish it off with a heatgun for about 2 minutes per sq ft and then you can sand away. No smell lingers after the pieces dry and they show some of the most striking figure in burl. h
