KEYWORDS: Safety-Critical Software; Software Quality Assurance; Airborne Systems. JOURNAL NAME: Journal of Software Engineering and Applications, Vol.7 No.3, March 27, 2014. ABSTRACT: The tragic nature of safety-critical software failure's consequences makes high quality and extreme reliability requirements in such types of software of paramount importance. Far too many accidents have been caused by software failure error or where such failure/error was part of the problem. While standards for certification and development of safety-critical software have been developed by authorities and the industry, very little research has been done to address safety-critical software quality. In this paper, we study safety-critical software embedded in airborne systems. National Academies Study Software for Dependable Systems: Sufficient Evidence? WHY CURRENT APPROACHES FAIL Today's software developers rely on two techniques to make their software more dependable: process and testing. Process includes collection of detailed statistics and explicit mechanisms for adjusting the process accordingly. Testing is used for two very different purposes.
